

**RULES  
OF  
THE TENNESSEE PUBLIC SERVICE COMMISSION  
DIVISION OF UTILITIES**

**CHAPTER 1220 4 6  
TEN YEAR MASTER PLAN FOR TECHNOLOGY DEPLOYMENT  
BY TELEPHONE COMPANIES**

**TABLE OF CONTENTS**

1220-4-6-.01	Purpose	1220-4-6-.04	Deployment Schedules
1220-4-6-.02	Scope	1220-4-6-.05	Technology Deployment Plan for Individual
1220-4-6-.03	Fundamental Service Capabilities		Telephone Companies

**1220-4-6-.01 PURPOSE.**

- (1) Digital switching and fiber optic transmission systems are only the most visible elements of ever more complex and capable telecommunications systems. These technologies can support a wide variety of new services if widely deployed. Interactive two-way video services for education; high resolution, high speed color facsimile for medical and other commercial applications as well as for home shopping; high definition television, with movies on demand; high speed data communications services for business use; caller identification services; video telephone; secure voice; and user friendly, responsive home information services can be offered if equipment embodying these new technologies is put in place. Wide development is essential if the full benefit of such services is to be realized since telecommunications services often involve pairwise interactions and become most valuable when the number of users is large.
- (2) The Tennessee Public Service Commission (TPSC or Commission), in exercising its responsibility to regulate telecommunications service in the State of Tennessee, has reexamined the current approach to regulation and deployment of new technology. The result is a Ten Year Master Plan for technology deployment that will serve as a platform for new service capabilities into Tennessee and as a guide for reinvesting some of the expected benefits of the Commission's regulatory reform policy.
- (3) A report containing the Master Plan is on file at the Commission. The report also contains an assessment of current market needs, an evaluation of the existing telecommunications network as well as network currently planned by Tennessee's telephone companies, and a technological forecast.

**Authority:** T.C.A. §§65-2-102 and 65-4-104. **Administrative History:** Original rule filed August 3, 1992; effective September 17, 1992.

**1220-4-6-.02 SCOPE.**

- (1) The 10 year Master Plan adopted by the Commission represents an aggressive but achievable accelerated deployment of new technology in the local telephone network, with a focus on service capabilities. The added costs are within reason and should be capable of funding from increased operating efficiencies fostered by regulatory reform and from new service revenues; with little, if any, observable effect on the ratepayers in Tennessee.
- (2) The Plan takes into account the existing network and current plans, the forecast of new technology for feature enrichment, and the prospect that new applications will quickly evolve once the capabilities are ubiquitously in place.
- (3) The Commission, by adopting a Master Plan for Technology Deployment, is integrating the benefits of regulatory reform into the network infrastructure

(Rule 1220-4-6-.02, continued)

- (4) The Master Plan meets the Commission's objective of bringing the benefits of technology to all 95 counties in the State. It is based on several important definitions, which relate technology deployment to service capabilities required to support specific applications, and which classify the counties in the State according to their demographic makeup.
- (5) The Master Plan hereby applies to all telecommunications carriers in the State, including local exchange carriers, interexchange carriers and others. Since interexchange carriers already have adequate capability to meet any service capabilities that would be provided by the local exchange carriers under the proposed Master Plan, and since other (bypass) carriers are well-equipped to deploy whatever technology is appropriate to meet their specialized needs, the Master Plan focuses on the local exchange carriers, which are the principal agencies involved in bringing new service capabilities to the population at large. The unregulated telephone cooperatives have been included in the Plan on a voluntary basis.

**Authority:** T.C.A. §§65-2-102 and 65-4-104. **Administrative History:** Original rule filed August 3, 1992; effective September 17, 1992.

#### **1220-4-6-.03 FUNDAMENTAL SERVICE CAPABILITIES.**

- (1) The Master Plan, rather than specify deployment of new technology for its own sake, defines three fundamental services capabilities which the major new technologies will support:
  - (a) Intelligent Network Capability or Signaling System 7 (CCS #7) - This technology enables the telephone company to provide customer services such as caller ID, selective call forwarding, selective call blocking and data base access services as well as improved data transmission services for businesses. It will improve the network operations for local telephone companies which will result in greater cost savings and operating efficiencies in the future, Signaling System 7 which sets up a call faster and allows more customized services than its predecessor, is already in place in Tennessee's urban counties. The Plan accelerates deployment throughout the State.
  - (b) Integrated Service Digital Network (ISDN) - This will provide for simultaneous data, video and voice transmission over the same lines. This capability allows an order of magnitude increase in the digital transmission capacity compared to existing voice grade services and can support services such as high speed Fax, video and secure voice communication. Prior to adoption of the Master Plan, ISDN would have been implemented slowly beginning in 1992, with some areas of Tennessee not having ISDN capabilities within the next 10 years. The Plan accelerates deployment, making ISDN available statewide by 2000.
  - (c) Broadband - This encompasses high speed services requiring a fiber optic transmission system and broadband digital switches. This capacity includes transmission at 45 megabits per second and up, and supports such services as full motion interactive video, high definition television, and high speed data transmission. Broadband capacity is not currently available in some areas in Tennessee, but is expected to be available after 1995 under the Plan.

**Authority:** T.C.A. §§65-2-102 and 65-4-104. **Administrative History:** Original rule filed August 3, 1992; effective September 17, 1992.

**1220-4-6-.04 DEPLOYMENT SCHEDULES.**

- (1) In order to develop rational deployment strategies for each of the service capabilities, counties are classified according to their demographic characteristics as urban, suburban or small urban, and rural. Under the Plan, the various service capabilities are to be deployed as follows:
  - (a) Full deployment of intelligent network capability (CCS#7) in the five urban counties in 1991, and in the rest of the State by 1993.
  - (b) Deployment of ISDN in 1991 in the urban areas, moving to full deployment by 1998. In the suburban counties, deployment will start in 1993 with rapid initial buildup and full deployment by the year 2000. Similarly, deployment will start in rural counties in 1994 with a rapid initial buildup, leading to full deployment in the year 2000.
  - (c) Offer broadband capability in the urban counties starting in 1995, in suburban counties starting in 1997, and in rural counties starting in 1999. In all cases, broadband is planned to grow slowly at first, reaching 10 percent penetration in the urban areas, 5 percent in the suburbs and 2 percent in the rural areas by the year 2000.
- (2) These deployment schedules are designed to require additional expenditures by the telephone companies that do not fluctuate too much from year to year. The total additional cost over the ten-year period is just under \$400 million, with the highest cost, close to \$100 million, incurred in 1991. Translating these into estimates of revenue requirements, the increase fostered by the Master Plan is an average of about \$50 million per year, ranging from \$27 million in 1992 to \$67 million in 1999. These cost increases represent an approximate 11.5% increase in capital expenses and 4.75% increase in revenue requirements over the life of the Plan. These estimates do not reflect any of the operational savings or new service revenues which will flow from accelerated deployment.
- (3) Not included in the costs is a plan to deploy fiber interoffice trunks to all wire centers serving more than 1,000 access lines by 1993, and to all wire centers by 1995. Although not needed for the service capabilities defined above, this deployment will allow provision of broadband private line services to every county in the State by 1993 and to every wire center by 1995. It is expected that the additional costs of this deployment will be small since a great deal of added fiber trunk capacity is already included in current plans.

**Authority:** T.C.A. §§65-2-102 and 65-4-104. **Administrative History:** Original rule filed August 3, 1992; effective September 17, 1992.

**1220-4-6-.05 TECHNOLOGY DEPLOYMENT PLAN FOR INDIVIDUAL TELEPHONE COMPANIES.**

- (1) The following is a key to abbreviations used in paragraphs (2) and (3).
